```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (1) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight of a copolymer (CP), which has an identified molecular weight of a copolymer (CP), which has an identified molecular weight of and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glather acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or mutibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune cophoritis, autoimmune thyroiditis, autoimmune baemolytic purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves disease, Gillain-Barre's syndrome, Hashimoco's disease, dilaparhic myxoedema, myasthenia gravis, psyndrome, pemphigus vulgaris, or systemic lupus erythematosus. Mediated-mediated diseases which can be treated include host-versus-graft disease, graft-versus-seind disease, and delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to milecular weights molecules, which makes them ideal for use as
                                                                                                                                      Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases

Copolymer molecular weight TV-marker amino acid sequence SEQ ID NO:6

(first entry)

28-JUL-2000

Copolymer; molecular weight marker; TV-marker; immune disease; glatiframer acetate; autoimmune disease; antiarthritic; neuroprotective; osteopathic; immunosuppressive; antithyroid; antiinflammatory; antidiabetic; thyromimetic; hemostatic; antipsoriatic; dermatological; antiannaemic; immunosuppressive; demyelinating disease; osteopathritis; inflammatory condition; multiple sclerosis; rheumatoid arthritis; condition; multiple sclerosis; rheumatoid arthritis; condition; multiple sclerosis; rheumatoid arthritis; choin's disease; chronic immune thrombocytopaenia purpura; colitis; diabetes mellitus; Graves disease; Guillain-Barre's syndrome; psoriasis; Hashimoto's disease; idiopathic myxoedema; myasthenia gravis; pemphigus vulgaris; systemic lupus erythematosus.

Unidentified

glatiramer acetate; autoimmune disease; antiarthritic; neuroprotective; osteopathic; immunosuppressive; antithyroid; antiinflammatory; antidiabetic; thyromimetic; haemostatic; antipsoriatic; dermatological; antianaemic; immunosuppressive; demyelinating disease; osteoarthritis;

Copolymer molecular weight TV-marker amino acid sequence SEQ ID NO:7.

AAY82577 standard, peptide; 109 AA.

AAY82577

28-JUL-2000 (first entry)

AAY82577;

Copolymer; molecular weight marker; TV-marker; immune disease;

. WO200018794-A1.

```
AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides (I) for determining the molecular invention describes polypeptides (I) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight cand an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatiramer acetate related terrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple concertaintis, autoimmune bacenlytic anaemia, autoimmune cophoritis, outcoimmune thrombocytopaenia uveoretinitis, contact sensitivity disease, diabetes mellitus, Graves (Durbura, Colitis, contact sensitivity disease, diabetes mellitus, Graves (Inpus erythematosus. Mediated-mediated diseases which can be treated concertained molecular wishes psoriasis, peophigus vulgaris, or systemic include host-versus-staft disease, graft-versus-host disease, and delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to malecular weights and prised them ideal for use as
                                                                                                                                                                                                                                                                                             Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9; Gaps

AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (1) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight of a copolymer (CP), which has an identified molecular weight of an an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune altibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatorid arthritis, osteoarthritis, autoimmune haemolytic unamenia, autoimmune cophoritis, autoimmune thyroiditis, autoimmune cureoretinits, contact sensitivity disease, diabetes mellitus, Graves diseases, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic myxoedema, myasthenia gravis, poempligus vulgaris, or systemic lugars, erythematosus. Mediated-mediated diseases which can be treated in the contact sensitivity diseases which can be treated in the contact sensitivity diseases which can be treated in the contact sensitivity diseases which can be treated in the contact sensitivity diseases which can be treated in the contact sensitivity diseases which can be treated in the contact sensitivity diseases which can be treated to the companies of the contac
                                                Crohn's disease; chronic immune thrombocytopaenia purpura; colitis; diabetes mallituris, Graves disease; Gulliain-Barre's syndrome; psoriasis; Hashimoto's disease; idiopathic myxoedema; myasthenia gravis; pemphigus vulgaris; systemic lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          include host-versus-graft disease, graft-versus-host disease, and delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to glatiramer acctate molecules, which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases

weight TV-marker polypeptides from the present invention. The present invention describes polypeptides from the present invention. The present invention describes polypeptides (1) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatizamer acctate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-ediated or antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic unecentaits, Crohn's disease, inclument thyroiditis, autoimmune uveoretinitis, Crohn's disease, chonic immune thyroiditis, autoimmune uveoretinitis, crohn's disease, chonic immune thyroiditis, autoimmune purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic myxoedema, myasthenia gravis, psoriaais, pemphigus vulgaris, or systemic lupus erythematosus. Mediated-mediated diseases which can be treated
                                                                                                         glatiramer acetate; autoimmune disease; antiarthritic; neuroprotective; osteopathic; immunosuppressive; antithyroid; antiinflammatory; antidabetic; thyrominetic; haemostatic; antibaoriatic; dermatory; antidabetic; thyrominetic; haemostatic; antipaoriatic; dermatory; antianaemic; immunosuppressive; demyalinating disease; osteoarthritis; inflammatory condition; multiple sclerosis; rheumatoid arthritis; cronn's disease; chronic immune thrombocytopaenia purpura; colitis; diabetes mellitus; Graves disease; Guillain-Barre's syndrome; psoriasis; Hashimoto's disease; idiopathic myxoedema; myasthenia gravis; pemphigus vulgaris; systemic lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       include host-versus-graft disease, graft-versus-host disease, and delayed-vype hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to glatiramer acetate molecules, which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                               Copolymer molecular weight TV-marker amino acid sequence SEQ ID NO:4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Indels 11; Gaps

antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoria tribritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune oophoritis, autoimmune thyroiditis, autoimmune uveoretinitis, Crohn's disease, chronic immune thrombocytopaenia purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves disease, duillain-Barre's syndrome, Hashimeto's disease, idiopachic myxoedema, myasthenia gravis, psoriasis, pemphigus vulgaris, or systemic lupus erythematosus. Mediated-mediated diseases which can be treated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (I) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or
                                                                                                                                                                                                                                                                                                                                                                                   Copolymer; molecular weight marker; TV-marker; immune disease; glatiramer acetate; autoimmune disease; antiarthritic; neuroprotective; osteopathic; immunosuppressive; antithyvoid; antiinflammatory; antidiabetic; thyromimetic; haemostatic; antipsoriatic; dermatological; antidiamento; immunosuppressive; demyelinating disease; osteoarthritis; inflammatory condition; multiple sclerosis; rheumatoid arthritis; Crohn's disease; chronic immune thrombocytopaenia purpura; colitis; diabetes mellitus; Graves disease; Gulllain-Barre's syndrome; psoriasis; Hashimoto's disease; idiopathic myxoedema; myasthenia gravis; pemphigus vulgaris; systemic lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              include host-versus-graft disease, graft-versus-host disease, and delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to glatiramer acetate molecules, which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                                                                                                                                                                                                                                                                                                       Copolymer molecular weight TV-marker amino acid sequence SEQ ID NO:3.

The present invention relates to a transporter system for delivering nucleic acid to a cell. The system comprises a nucleic acid binding complex, consisting of a binding molecule bonded non-covalently to the nucleic acid, and covalently to a surface ligand, and a lytic agent. The binding molecule is spermine or a spermidine derivative. Nucleotide sequences AAA3631-A3652 and peptide sequences AAY98500 are used in the construction of the transporter system of the invention. The transporter system is used in gene therapy, particularly to deliver uncleic acids to hepatocytes, muscle cells or bone forming cells, e.g for treating cardiovascular disease, cancer, and infection. The transporter systems are also used to create transgenic animals (as models or transforming cells or produce proteins, or transfecting cells in clude transforming cells to produce proteins, or transfecting cells in clude transforming cells to produce proteins, or transfecting cells in clude transforming cells to produce proteins, or transfecting cells in clude transfecting of felected cells and tissues. The lytic agent provides for release of the nucleic acid into the cellular interior, from endosomes, without requiring endosomal or lysosomal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ų.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             System for transporting nucleic acid into cells, useful e.g. in gene therapy and for generating transgenic animals, comprises binding agent linked to nucleic acid, surface ligand and lytic agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                      셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a nucleic acid transport system (NTS) for delivering nucleic acid into a cell. The NTS contains but is not limited to 5 components: (a) the nucleic acid or a macromolecule to be delivered; (b) a "moiety that recognises and binds to a cell surface receptor or antigen or is capable of entering a cell through cytosis; (c) a nucleic acid or macromolecular molecule binding moiety; (d) a moiety that is a capable of moving or initiating movement through a nuclear membrane; and/or (e) a lysis moiety that enables the transport of the entire complex from the cell surface directly into the cytosis, (c) a nucleus or (e) a lysis moiety that enables the transport of the entire complex from the cell surface directly into the cytoplasm of the cell. The NTS can be used to treat disorders by targeting of specific nucleic acid accordingly. The NTS can also be used to create transgenic animals for assessing human disease, such as cancer, in an animal model. The NTS can be used in vitro with tissue culture cells which allows the role of various nucleic acids to be studied by targeting expecific expression into specifically targeted tissue culture cells. The lysis agent within the NTS avoids the problem of endosomal/lysosomal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence represents poly-Lys-Ala, used to bind nucleic acid in a nucleic acid transporter system. The nucleic acid transporter system uses nucleic acid binding complexes containing surface ligands which are capable of binding to a cell surface receptor and entering the cell through cytosis. The compounds of the invention are either ligands, binding molecules (surface ligands), lysis agents, spacer molecules or their intermediates. The ligands, binding molecules is used in nucleic acid transporter systems to deliver nucleic acid into specific cells e.g. in gene therapy to deliver nucleic acid into hepatocytes, muscle cells or bone forming cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               spacer molecule;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acid transport system, useful for creating transgenic animals for assessing human disease such as cancer in an animal model -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                        AAR06445
                셤
                                                                                                          This invention describes a novel system (I) for delivering a nucleic acid to a cell, comprising a binding complex comprising a ligand binding molecule noncovalently bound to a nucleic acid and covalently linked to a surface ligand, and a second binding complex comprising a second binding molecule noncovalently bound to a nucleic acid and covalently linked to a nuclear ligand. The complexes are simultaneously bound to the nucleic acid. The nucleic acid transporter system can also be used in a method for the in vivo targeting of the insertion of DNA into a cell. It can also be used in processes for producing transformed cell lines. The system can be used to deliver a variety or proteins and polypeptides, such as hormones, growth factors, enzymes, clotting factors, apolipoproteins, receptors, drugs, oncogenes, tumor antigens, tumor the transporter system uses lysis agents to overcome the problems of endosomal/lysosomal degradation seen with prior art systems.
                                                                                                                                                                                                                                                                                                  Nucleic acid delivery, nucleic acid transporter system; hormone; enzyme; growth factor; clotting factor; apolipoprotein; receptor; drug; oncogene; tumor antigen; tumor suppressor; viral antigen; parasitic antigen; bacterial antigen.
Nucleic acid transporter system for delivering nucleic acid into a cell, useful for delivering proteins and polypeptides to cells, including growth factors, enzymes, hormones, and tumor suppressors
                                                                                                                                                                                                                                                                  Nucleic acid transporter system peptide ligand SEQ ID NO 64.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WOO SLC;

coding for rCOP-1-77 were subcloned from pREV 2.1 to pBG3-2deltaN (deposit: 20.0VOY-1944 US.6459100), and plasmid used to express Protein A. The resulting plasmids encode fusion proteins consisting of beta-glucuronidase, Protein A, and rCOP-1 sequences.

A methionine residue occurs between the Protein A and rCOP-1 sequences. A methionine residue occurs between the Protein A and rCOP-1 sequences. C. the COP-1 polypeptide may be cleaved from the fusion protein. C. COP-1-77 contains oligonucleotide duplexes incoding the following segments: YKK, BEK, KAK, ARK, and AAA. The N-terminal alanine residue is left behind following CL rareage of the fusion protein. They are used to prevent, arrest or control a encephalomyelitis. They are used to prevent, arrest or control a demyelinating disorder, e.g. multiple sclerosis. They may also be used as additives to hair care products to confer beneficial effects on damaged hair or as supplements for diets deficient in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 coding for rCOP-1-19 were subcloned from pERV 2.1 to pBG3-2deltaN (deposit: 20-NOV.1984 US4691009, NRRL B-15910), a plasmid used to express Protein A. The resulting plasmids encode fusion proteins consisting of beta-glucuronidase, Protein A, and rCOP-1 sequences. A methionine residue occurs between the Protein A and rCOP-1 sequences, originating from the 5' linker sequence, in order that the COP-1 polypeptide may be cleaved from the fusion protein. rCOP-1-19 contains oligonucleotide duplexes incoding the following segments: YKK, AAE, KAK, KKA, YEA, AKA KEA, and AAA. The N-terminal alanine residue is left behind following CNBr cleavage of the supplements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The product prevents or arrests experimental autoimmune encephalomyelitis. They are used to prevent, arrest or control sdemyelinating disorder, e.g. multiple sclerosis. They may also de used as additives to hair care products to confer beneficial effects on damaged hair or as supplements for diets deficient in certain amino acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

AAR84565-R84569 are polypeptides of the TCR27 protein of T.cruzi
The proteins are all fusion products with glutathione-5-transferase
(GST) and some contain a linker sequence. The TCR27 protein comprises
(GST) and some contain a linker sequence. The TCR27 protein comprises
(GST) and some contain a linker sequence. The TCR27 protein comprises
(CST) conserved 14 as sequence and a 68 as C-terminal region. This sequence
encodes the GST sequence, the Ag44 polypeptide contg. 16 of the 69
repeat units and also contains the amino and carboxy terminal
(CST) The TCR27 polypeptides of the invention are useful
for the diagnosis of Chagas disease (American Trypanosomiasis), they
are capable of detecting anti-T.cruzi antibodies; or for blood
screening. The TCR27 protein has epitopes to which most T.cruzi
infected individuals have antibodies. The TCR27 polypeptides with serum from patients with leishmaniasis, schistosomiasis,
or autoimmune disease and are hence less likely to cause false
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       4; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 AKKYAKKEKAYAKKAEKAAKKAEAKAYKAAEAKKKAKAKAEAKKYAKAAK-AEKKEYAAAEA 59

AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (1) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune CC diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple collerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic ansemia, autoimmune opphoritis, autoimmune thyroidists, autoimmune thoromocycopaenia uveoretinitis, contact sensitivity disease, diabetes mellitus, Graves purpura, collitis, contact sensitivity disease, diabetes mellitus, Graves disease, Glillain-Barre's syndrome, Hashimoto's disease, and collide host-versus-graft disease, and calayed-type hypersenatitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to collising an eacetare molecules, which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     45 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

The MDP1 protein can be used fidagnosis and treatment of diseases involving pathogenic acid-fast bacteria, such as tuberculosis, Mycobacterium avium intracellular complex (MAC) and Hansen's disease.
                                                                                                                                                                                                                                                                                        Mycobacterium bovis BCG strain; mycobacterium DNA binding protein 1;

ARR84565-R84569 are polypeptides of the TCR27 protein of T.cruzi

The proteins are all fusion products with glutathione-5-transferase
(GST) and some contain a linker sequence. The TCR27 protein comprises
(GST) and some contain a linker sequence. The TCR27 protein comprises

C a 95 amino acid (aa) N-terminal region; 69 repeats of a highly
C conserved 14 as sequence and a 68 as C-terminal region. This sequence
c conserved 14 as sequence and a 68 as C-terminal region. This sequence
c conserved units and also contains a linker sequence. The TCR27
polypeptides of the invention are useful for the diagnosis of Chagas
dissease (American Trypanosomiasis), they are capable of detecting
anti-T.cruzi antibodies; or for blood screening. The TCR27 protein
has epitopes to which most T.cruzi infected individuals have
antibodies. The TCR27 polypeptides will not react with serum from
c patients with leishmaniasis, schistcosomiasis, or autoimmune disease
and are hence less likely to cause false positives in diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polypeptide(s) from the TCR27 protein of Trypanosoma cruzi - a immunoassay reagent for specific diagnosis of Chagas disease, also related nucleic acid and transformed cells
                                                                                                                                                                                                                                                                 Location/Qualifiers

Sequence 201, Application US/10051643

Publication No. US20020197265A1

Fubblication No. US20020197265A1

GENERAL INFORMATION:

APPLICANT: Watson, James D.

APPLICANT: Tan, Paul L. J.

TITLE OF INVENTION: Methods and Compounds for the Treatment

TITLE OF INVENTION: Of Immunologically-Mediated Diseases of the Respiratory

TITLE OF INVENTION: Of Immunologically-Mediated Diseases of the Respiratory

TITLE OF INVENTION: System using Mycobacterium Vaccae

FILE REFERENCE: 11000.1008c2

CURRENT APPLICATION NUMBER: US09/156,181

FRIOR FILING DATE: 1998-09-17

PRIOR FILING DATE: 1999-09-17

PRIOR FILING DATE: 1997-12-23

NUMBER OF SEQ ID NOS: 208

SEQ ID NO 201

LENGTH: 223
                                                                                                                                                                                                                                                                                        WS-10-184-832-5

1 Sequence 5, Application US/10184832

2 Sequence 5 Application US/10184832

3 Sequence 5. Application No. 1020030022857A1

3 GENDRAL INFORMATION:

4 APPLICANT: Xu et al.

5 TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE

7 TITLE OF INVENTION: TREATMENT OF BODY WEIGHT DISORDERS, INCLUDING OBESITY

7 TITLE OF INVENTION: TREATMENT OF BODY WEIGHT DISORDERS, INCLUDING OBESITY

7 TITLE OF INVENTION: TREATMENT OF BODY WEIGHT DISORDERS, INCLUDING OBESITY

7 CURRENT APPLICATION NUMBER: 2002-06-28

7 FRIOR APPLICATION NUMBER: 60/303,250

7 PRIOR FILING DATE: 2001-07-05

Sequence 64, Application US/08460890A

Patent No. 5994109

GENERAL INFORMATION:

APPLICANT: Woo, Savio L.C.
APPLICANT: Cristiano, Richard J.
APPLICANT: Gretchalk, Stephen
TITLE OF INVENTION: WUCLEIC ACID TRANSPORTER SYSTEMS AND
TITLE OF INVENTION: WUCLEIC ACID TRANSPORTER SYSTEMS STREET: 633 West Fifth Street
SYREET: Galiconia
COUNTRY: U.S. Angeles

COUNTRY: U.S. Angeles

STREET: Suice 4700
CITY: Los Angeles

CONFUTER: Day Angeles

CONFUTER: Day Angeles

CONFOUTER: Day Angeles

CONFOUTER: Unne S. 1995

                                                                                                                                                                                                                                                                                           JOS-US-116-194-2.

Sequence 2, Application US/08216894

Patent No. 5876734

GENERAL INFORMATION:

APPLICANT: Kirchhoff, Louis V.

APPLICANT: Cotsu, Keiko

ITILE OF INVENTION: POLYPEPTIDES FOR DIAGNOSING INFECTION

TITLE OF INVENTION: WITH TRYPANOSOMA CRUZI

NUMBER OF SEQUENCES: 10

CORRESPONDENCE ADDRESS:

ADDRESSE: Foley & Lardner

STREET: 3000 K Street, N.W., Suite 500

CITY: Washington, D.C.

COUNTRY: USA

ZIP: 2007-5109

COMPUTER: READABLE FORM:

MEDIUM TYPE: Flopy disk

COMPUTER: PatentIn Release #1.0, Version #1.25

CURRET APPLICATION NUMBER: US/08/216,894

FILING DATE: 24-MAR-1994

ATTORNEY/AGENT INPORMATION:

REGISTRATION NUMBER: 29,768

REGISTRATION NUMBER: 29,768

RELECOMMUNICATION INFORMATION:

NAME: BENT, Stephen A.

REGISTRATION NUMBER: 29,768

TELLECOMMUNICATION INFORMATION:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
